hand creams

Cherishes your hands

Own development

We have been producing ISOLDA hand creams since back in 1996. We are a purely Czech company based in Vysočina in Bystřice nad Pernštejnem. We have three laboratories with excellent equipment at our production facility. One is for development, there's an operational laboratory, and a microbiological one. The greatest attribute of the brand is its own in-house development. A team of experts has been working for many years on getting the right composition of creams, and it is constantly perfecting them. They test the effects of various natural substances and they investigate the effect on all skin types. The knowledge and experience gained in this way continue to contribute to improving the quality of ingredients in the creams and the way that they are produced.

Certified creams

The production of ISOLDA creams is subject to strict standards. It begins with getting just the right raw materials and testing their properties and cleanliness. These hygienic rules are adhered to throughout the process of production, storage and dispatch.

The creams and their ingredients are also subject to strict, demanding tests, performed by accredited laboratories.

These tests always result in a certificate declaring something, for example the dermal tolerance of the creams. All ISOLDA

creams are tested in this way and then also certified. Our facility for the production of cosmetics is equipped with state-of-the-art technology.

The whole production process takes place automatically in an enclosed environment without any contact

Cherishes your hands...

with human hands. Therefore, the product itself (in this case cream) cannot become contaminated during any part of the production cycle. The consumer who buys the cream is therefore sure that his or her hand is the first that touches the actual product.

New, improved creams

The creams are poured into more stable, wider containers than before, still with a volume of 100 ml. They have a practical Euro opening for hanging, and a new, very convenient tiltable lid. The colours of these lids are designed to be easily distinguished from each other. We produce many varieties of ISOLDA creams, which is why they offer the largest range of oils and active ingredients on the market. Each of us can choose the type of cream that suits his or her skin type best. In the new formula we put an emphasis on increasing the content of active ingredients and natural oils. The seven hand creams of our range are easily rubbed into skin and absorbed. The other two of them have unique formula and the technology of production, and so they are very oily and suitable especially for care about dry skin of hands. They are very popular by workers who are longtermly in touch with water or substances which dries the skin.

- Traditional hand creams with atests for workers.
- High content of active ingredients and natural oils
- Practical Euro opening for hanging
- Easier to rub into skin and absorb
- Tilttable lid

„The greatest attribute of any brand is its own development.“

...whatever they do

Chamomile with argan oil

Clinically tested cream containing an extract of real chamomile and argan oil. The cream combines the healing effects of chamomile with the softening and nourishing properties of argan oil. When applied regularly, the skin regains its vitality and resistance. The cream is easily absorbed and is very pleasant for use at any time of day.

It is not intended for use on open wounds.

Real chamomile is a very highly valued herb for internal, respiratory and external use, with antiseptic, calming, and anti-inflammatory effects. It shortens the time needed for the skin to regenerate. Besides well-known ingredients such as azulen and bisabolol, it also contains salicylic acid, flavonoids, glycosides and other active ingredients.

Argan oil is obtained from the seeds of argan (*argania spinosa*), sometimes also called „Moroccan gold“. It is a very highly valued oil due to the high content of active ingredients, such as unsaturated fatty acids, squalenes, tocopherols and vitamins. Its nourishing and smoothing properties make it appropriate for use in holistic care for skin.

soothing cream

Marigold with flaxseed oil

This soothing cream will be appreciated especially by people with sensitive skin. When used regularly, the actual ingredients in the extract of marigold act along with the oil contained in the cream so that skin actively regenerates and remains smooth and soft. It is not intended for application on open wounds.

Marigold has been a highly valued herb since back in the times of Ancient Greece and Rome, when it was used for its regenerative, soothing, anti-inflammatory and healing effects. Due to its ingredients and effects, marigold is used abundantly in pharmaceuticals. It contains essential oil, carotenoids, flavonoids, saponins, resins and other substances.

Flaxseed oil is obtained by pressing the seeds of flax. Due to the high content of omega 3 and 6 unsaturated fatty acids it is suitable as a food supplement. It is very effective for treating skin problems. When applied externally it is outstanding at regenerating dry, tired and eczematous skin and for regular skincare.

soothing cream

Beeswax with thyme

A clinically tested cream for effective skin hydration containing beeswax and extract of thyme. When applied regularly the skin remains supple and smooth. The pleasant feeling is enhanced by a gentle herbal aroma.

Beeswax is a natural product made by bees. Purified beeswax is gaining popularity in the cosmetics industry, where it is used because of its hydrating and protective properties. Due to its structure it is capable of creating a protective film on the skin, protecting against negative environmental effects. The wax smoothes the skin, which is why it is used especially for producing lip balm.

Breckland thyme has been a very highly valued aromatic herb for very many years. It is used for internal, respiratory and external application. The plant contains a large amount of active ingredients that have antiseptic and anti-inflammatory properties and that help blood circulation. It is often used for oral hygiene and in aromatherapy, and it is also important in skincare.

hydrating CERTIFICATION

The cream has been clinically tested at a specialist site. It has been proven that the cream hydrates the skin and keeps it hydrated for a long time.

isolda

hydrating cream

Keratin with almond oil

This luxurious nutritious cream combines a rich cream base with a high content of added keratin and almond oil. It is unique among our creams in terms of its ingredients. The original combination of these ingredients helps to maintain skin elasticity, and to soften and nourish the skin on hands and nails. When applied regularly, the skin stays smooth and firm. The cream can be used for regenerative packs too.

Almond oil is obtained by pressing the seeds of almond trees. It has been known for very many years for its softening and nutritional effects, therefore it is a very popular traditional ingredient in particular in the cosmetics industry. Due to its high content of fatty acids, vitamins and minerals, and its fast absorption, it is used in creams designed to treat dry and aging skin, in aromatherapy, and as a massage oil.

Keratin is a protein, naturally contained in skin, hair and nails. 'Hydrolysed keratin' is what is used for cosmetics; it comes originally from wool, and is rich in amino acids and minerals, and has a hydrating, softening and smoothing effect. It significantly increases the elasticity of skin. It is often also used in hair products.

nourishing cream

Lanolin with sea buckthorn oil

This oily cream, due to its unique combination of purified pharmaceutical lanolin, sea buckthorn and soy oil, creates a rich consistency that helps to nourish and protect the skin against negative environmental effects, in particular humidity. Despite the high proportion of oils and waxes, the skin remains pleasantly smooth after application. The cream is suitable for tired skin on hands during work in damp conditions, with cleaners and solvents. The cream can also be used for regenerative packs.

Sea buckthorn oil is obtained from the fruit of sea buckthorn, which is rich in biologically active substances. Besides its high content of palmitic fatty acid, it contains a high proportion of carotenoids, vitamins, flavonoids, rutin and minerals. It is an important substance used in the cosmetics industry and it is valued in particular for its regenerative and anti-inflammatory properties.

Lanolin is a wax that occurs naturally, obtained from sheep wool. Purified lanolin of pharmaceutical quality is used in cosmetics too for treating skin, creating a protective waterproof layer and softening the skin.

protective cream

Salvia with biotin

Disinfecting your skin is often an essential part of sanitation procedures. There is a need for anti-bacterial action especially under conditions of increased demand, such as at beauty salons and on food industry premises. The unique combination of the cream base with its anti-bacterial component is a suitable supplement for sanitation procedures. The cream has been tested for bactericidal effects in disinfection of hands and skin for specific strains of bacteria. The cream is easily absorbed and it has a unique softening effect on the skin. The sage extract also plays an irreplaceable role in skincare.

Common sage is an aromatic herb valued for its respiratory and external use with a strong antiseptic, calming and anti-inflammatory effect. It is used very often for oral hygiene and is increasing in popularity for other cosmetic applications too, being used most frequently for toning, calming, antioxidant and cleansing purposes.

Biotin or coenzyme R or vitamin H in the body (along with other B vitamins and vitamin A) plays a part in a wide range of biochemical reactions; it is important for the renewal and growth of cells.

protective cream with antibacterial additive

Olive

with tea tree oil

This is a cream in which two important active ingredients - olive oil and purified tea tree essential oil - combine with each other. Olive oil is known for its softening properties, and tea tree essential oil helps to calm the skin. Due to its composition, the cream helps to regenerate the skin.

Olive oil is obtained by pressing fruits of European olive, a typical Mediterranean plant. Olive oil is well-known for its nutritional and cosmetic properties. Important components of the oil are fatty acids, such as oleic acid and palmitic acid. The oil improves the skin's elasticity, and it has regenerative and hydrating properties.

Tea tree oil – purified oil from the leaves of narrow-leaved paperbark (or of tea tree) contains approximately 100 different active ingredients, most of which have an antibacterial effect or a mildly anaesthetic effect, therefore it soothes too. Tea tree oil is commonly known for being a natural antiseptic.

regenerative cream

Aloe vera with panthenol

The combination of the two active ingredients (aloe extract and D-panthenol) gives rise to a balanced cream with outstanding properties. Due to the 5x percentage increase in content of aloe and D-panthenol, the cream has excellent regenerative and protective properties, it is easily absorbed, and it keeps the skin soft and smooth.

Aloe extract is obtained by careful drying of aloe vera leaves, the use of which as a healing plant has been recorded as early on as in Ancient Egyptian times. It is known that aloe helps stimulate the regeneration of cells, it has significant hydrating, anti-inflammatory effects, and it helps in the treatment of skin problems, therefore it is used a lot, particularly in the cosmetics industry.

D-Panthenol is an oil substance obtained synthetically, also known as provitamin B5, which gets converted into the important vitamin B5 only once it has entered the body. Due to its calming, regenerative and hydrating properties it is used not only in the cosmetics industry, but also in pharmacology. It can also be found in hair products and in products for use after sun-bathing.

regenerative cream

Hemp with evening primrose oil

It's the combination of these oils, known for their beneficial skincare effects, that can help skin prone to irritation and dryness. Due to the oils, the skin will stay smooth for a long time. The cream can be easily absorbed and it doesn't leave your hands feeling excessively greasy or dry either. The pleasant feeling is enhanced with a light aroma of green tea.

Hemp oil is pressed from seeds of cannabis sativa, it has excellent softening, calming and moisturising properties. Due to the content of omega 3 and 6 unsaturated fatty acids, it can alleviate skin problems linked to dry skin, psoriasis or atopic eczema, and it can help skin to regenerate.

Evening primrose oil is pressed from seeds of evening primrose. It contains a very important unsaturated fatty acid called gamma-linolenic acid. By rubbing into the skin and massaging it helps to keep the skin flexible, firm and smooth, to renew natural lipid filter, support natural hydration, and regenerate burnt and sore skin.

- **Unique combination of vegetable oils**
